HIGHLIGHTS

- **75 women** (average age 55±13 years) with stress, urge or mixed **urinary incontinence** (UI) symptoms were enrolled in this study.
- Each patient received **six HIFEM treatments** twice a week for three consecutive weeks.

Results at 3 months:

- Patients reached on average **64% improvement** of urinary incontinence symptoms (ICIQ-SF).
- **44%** of patients reported they **did not need to use hygiene pads anymore**.
- **34%** of patients were **symptom-free** from urinary incontinence.

Urinary incontinence symptoms reduction after 6th treatment and at 3 months.
